DETAILED ACTION

Election/Restriction

1. Claims 3 and 5-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5. Should claim 1 be found allowable, the claims, in their current form, associated with groups II-V will be rejoined therewith.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by applicant's admitted prior art in figures 1-6 (AAPA, hereinafter).

AAPA discloses an electromagnet assembly [figures 1-6] comprising:

-a ring member [1] formed of a tubular spool with a pair of annular flanges;

- a coil member [3];

- a ring case [4] having an annular groove with an open edge of which is in a direction parallel

to its axis in which the coil member is disposed;

Art Unit: 2832

- an opening [4a] formed through the ring case adjacent to a closed end surface thereof; and
- a connector [5] disposed on the ring case adjacent to the closed end surface and the connector covering the opening, connecting an external wire [6a, 6b] to the coil, mounted within the opening; and
- an adhesive [13] fixing the connector to the opening [figure 4].

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over AAPA in view of Ishimaru [US 5,307,038].

AAPA disclose the instant claimed invention except for: the connector being pressed into the opening.

Ishimaru discloses a connector [27] being pressed into an opening of a magnet support member.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use press the connector into the opening of AAPA, as suggested by Ishimaru, for the purpose of securing the connector while the adhesive dries.
